IN THE CLAIMS:

4. A multi-signal analyzer according to any **one** of claims 1-3, wherein the time axis adjustment unit makes the other signal of the signals input to the AD converter to have the same time axis using the time axis of a selected one of the signals as a reference.
5. A multi-signal analyzer according to any **one** of claims 1-3 wherein the plurality of time series signals include multiple signals having a steady state.
6. A multi-signal analyzer according to any **one** of claims 1-3 wherein a time axis for a reference signal among the plurality of time series signals serves as a reference time axis for correlating all other signals of the plurality of time series signals, and wherein time delays are determined for each of said all other time series signals relative to said reference time axis for subsequent engine control processing.

REASONS FOR ALLOWANCE

2. Claims 1-6 are allowed.
3. The following is an examiner's statement of reasons for allowance: Prior art does not disclose an engine control system wherein the plurality of time series signals comprise signals
